

Richard Danzig
Secretary of the Navy

The Navy and the Marine Corps must capture the benefit of new technologies, particularly information technologies, that are transforming 21st-century work and warfare, by integrating them into how we fight, work, and live.

I see the Navy Marine Corps Intranet as the gateway to transformation for us... [it] will lead us to the kind of systems...that we need in the 21st century to truly transform the way we do business. The product that we see in the future, and the transformation in processes, and the way we manage information, and the effect that it has on our resource streams, will truly be dramatic.

ADM Vernon E. Clark, USN
Chief of Naval Operations

GEN James Jones, USMC
Commandant of the Marine Corps

Technologically advanced weapon systems require joint, secure, technologically interoperable systems to support them... This improved capability is critical to allow commanders the ability to manage, direct, and influence an increasingly complex battle space.
